Microsoft Incentives

\$4.4K Incentives earned when expanding from 100 seats to 200 seats of Business Premium through CSP

Microsoft 365 CSP incentive - indirect reseller

Requirement -

- 25 points minimum
- \$25K USD 12-month revenue

Measure and Reward

Incentives are based on billed revenue and calculated in accordance to billing cadence.

M365 CSP levers	Rate	Maximum incentive earning opportunity
M365 CSP Core	3.75%	\$93,750
M365 CSP Global Strategic Product Accelerator – Tier 1 (Business Premium, M365 E3)	<i>Innovate and Balance countries*</i> : 3.00%	\$75,000*
	<i>Scale countries**</i> : 4.00%	\$100,000**
M365 CSP Global Strategic Product Accelerator – Tier 2 (M365 E5, Copilot)	7.00%	\$175,000
M365 CSP Global Calling and Conference PSTN Accelerator	20.00%	Not applicable
M365 CSP Growth Accelerator*	7.50%	\$187,500

IMPORTANT: October 1, 2025 to November 30, 2025 will be calculated and paid under FY26 partner eligibility, levers, and rates. Earnings will be paid by January 15, 2026 per incentive launch payment SLA [here](#).

		Business Applications CSP incentives	Azure CSP incentives				Modern Work and Security CSP incentives	
Category		Solutions Partner for Business Applications	Solutions Partner for Data & AI (Azure)	Solutions Partner for Digital & App Innovation (Azure)	Solutions Partner for Infrastructure (Azure)	Solutions Partner for Modern Work	Solutions Partner for Security	
	Performance	15pts	30pts	30pts	30pts	20pts	20pts	
	Skilling	35pts	40pts	40pts	40pts	25pts	40pts	
	Customer success	50pts	30pts	30pts	30pts	55pts	40pts

Upskill Rewards Program

As part of our ongoing commitment to continuously empower and enable our partners, we've introduced the Upskill Rewards Program to incentivise partners to attain Microsoft certifications.

Partners that successfully pass eligible Microsoft certification exams during the program period can claim fixed subsidy amount from Synnex. Please refer to the [Terms and Conditions](#) document for full program details.

Current Promotions:

Microsoft 365 Accelerators: Earn up to \$8,000 rebate on eligible Microsoft 365 products.

Copilot Accelerators:

Category 1: Get 100% subsidy for first 3 months when you purchase up to 49 new seats of M365 Copilot.

Category 2: Get 100% subsidy for 10 seats per partner for the first 3 months when you add 50 or more new seats of M365 Copilot.

Azure rewards:

Power Boost: Get 80% off your first month PAYG Azure invoice for a new customer.

Power Build: Get up to \$15,000 in subsidy for leveraging CSP professional services.

Small Business Big Security: Earn up to \$1,000 rebate when you transact in M365 E5 Security add-on.

Upskill Rewards Program: Get your exam fee subsidised when you successfully complete an eligible Microsoft certification exam.

Ready to unlock these incentives?
Register your deals through Synnex CSP today

*Terms and conditions apply.

Overview of Microsoft Intune

Microsoft Intune is a **cloud-based endpoint management solution**.

- **App deployment** – Push Win32, Microsoft Store, web, and mobile apps to devices.
- **Configuration policies** – Define rules and controls for device health, security, and compliance.
- **Conditional Access integration** – Restrict access to Microsoft 365 and other resources based on compliance.
- **Endpoint security** – Configure security baselines, antivirus (Defender), BitLocker, firewall, and more.
- **Windows Autopilot integration** – Automate Windows device provisioning and setup.
- **Remote actions** – Wipe, reset, lock, locate, or retire devices remotely.

Microsoft Intune product family

Why Intune

Cloud native

No on-premise
infrastructure
required

Microsoft Integration

Use Entra ID as
directory, integrated
with Defender and
Purview

Continuous improvement

Clear roadmap and
new features and
improvement

Scalability and Autopilot

Intune is suitable
for SMBs and large
corporations

The Microsoft Ecosystem

Combining best-in-class productivity with advanced security

Microsoft 365

Productivity Suite

Join type

- Hybrid Join
- Entra ID Join
- Entra ID registered
- Co-managed with SCCM

JOIN TYPE
for Intune MDM

Hybrid Join Setup

Actions	Details
Install and configure Intune Connector	Microsoft Intune uses the on-premises Intune connector to generate a machine object in Entra ID. The connector acts as a bridge between on-premises AD and Entra ID.
Create Managed Service Account (June 2025)	Create msDs-ManagedServiceAccount objects in the Managed Service Accounts container
OU Delegation	Configure the MSA to allow creating objects in OUs
Manually change device name if required	Hybrid join does not support customized naming convention for devices, only prefix
Create Domain join profile in Intune	Domain join profile is used to contact on-prem domain

Hybrid Join workflow (Simplified)

Hybrid Entra ID Join with Autopilot

Benefits of Hybrid Join

Access to On-Prem Resources

File shares, legacy apps, on-prem printers

Group Policy

Full GPO support

Certificate (via On-prem Certificate Authority)

Device certificates for Wi-Fi, VPN, etc., via on-prem Certificate Authority

Entra ID Join workflow

Entra ID Join with Autopilot

Hybrid Join vs Entra ID Join

- Entra ID Join is highly recommended by Microsoft, it not only reduces on-premises overheads but also you can control everything in single pane of glass. Entra ID join is easy to set up and avoid potential policy conflicts
- Hybrid Join requires on-premises infrastructure and line of sight to on-premises Domain controller is required for user authentication. Device naming convention is not as flexible as Entra ID Join.

Hybrid Join

Devices joined
to on-premises AD
and Entra ID

Entra ID

Devices joined
to Entra ID only

Entra ID Register

Designed for BYOD device. However, even the device is only Entra ID registered, Intune can still "fully manage" the device. The user does not want their personal devices to be managed by the company

Microsoft account

Set up a work or school account

You'll get access to resources like email, apps, and the network. Connecting means your work or school might control some things on this device, such as which settings you can change. For specific info about this, ask them.

1

Alternate actions:

These actions will set up the device as your organization's and give your organization full control over this device.

[Join this device to Microsoft Entra ID](#)

[Join this device to a local Active Directory domain](#)

Device actions status

Action	Status	Date/Time	Error
No data			

<https://learn.microsoft.com/en-us/entra/identity/devices/concept-device-registration>

Join type – quick recap

	Hybrid Join	Entra ID Join	Entra ID registered
On-prem AD required	YES	NO	NO
Company owned device	YES	YES	NO
Managed by Intune	YES	YES	YES

If Entra ID registered is bad, what if my clients have requirement to use employees' personal device to access company data?

Windows 365

Use case –

- For employees with own PC
- Contractors or temp employee
- Shared device

Benefits -

- Data compliance for international company
- Scale up and down
- Easy to set up and fixed monthly pay

Enrolment options

- Hybrid join via GPO
- Autopilot
- End User enrolment via Access work or school in settings
- Bulk enrolment with provisioning package

Hybrid Join via GPO

To configure auto enrollment using a group policy, use the following steps:

1. Create GPO and link to OU where the devices will be synced to Entra ID and enrolled to Intune.
2. Ensure those devices are synced via Entra ID connect
3. Create an Entra ID group to group those devices for Intune management if required.

<https://learn.microsoft.com/en-us/windows/client-management/enroll-a-windows-10-device-automatically-using-group-policy#configure-the-autoenrollment-for-a-group-of-devices>

Enrolment with Autopilot

To register a brand-new device with Autopilot, use the following steps:

1. Start device and plug in USB with script
2. Press shift + F10 or go to sysprep to run the script
3. Enter tag and/or device name (Optional)
4. Once hardware hash is uploaded, the device is registered to Autopilot and bound to the tenant. There is also a computer object created in Entra ID.

```
Administrator: C:\Windows\system32\cmd.exe
Microsoft Windows [Version 10.0.26100.6899]

App Registration

This is to eliminate the requirement for authentication for device registration. Otherwise, you have to enter admin credentials for each device registration

Home > App registrations > Autopilot

Autopilot | API permissions

Search << Refresh Got feedback?

Warning: Granting tenant-wide consent may revoke permissions that have already been granted tenant-wide for that application. Permissions that users have already granted on their own behalf aren't affected.

Info: The "Admin consent required" column shows the default value for an organization. However, user consent can be customized per permission, user, or app. This column may not reflect the value in where this app will be used. [Learn more](#)

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admins as part of the consent process. The list of configured permissions should include all the permissions the application needs. [Learn more about permissions and consent](#)

+ Add a permission ☒ Grant admin consent for [redacted]

API / Permissions name	Type	Description	Admin consent req...	Status
▼ Microsoft Graph (3) ...				
DeviceManagementServiceConfig.Read.All	Application	Read Microsoft Intune configuration	Yes	✓ [redacted] ...
DeviceManagementServiceConfig.ReadWrite.All	Application	Read and write Microsoft Intune confi...	Yes	✓ [redacted] ...
User.Read	Delegated	Sign in and read user profile	No	✓ [redacted] ..

To view and manage consented permissions for individual apps, as well as your tenant's consent settings, try [Enterprise applications](#).

Group tag

- Group tag is assigned during Autopilot register process.
- Group tag is important; it tells which dynamic Entra ID group the device is going to join.
- Policies, apps and scripts assigned to this Entra ID group will be installed/applied during Enrollment status page.
- You can use different group tags for different departments/personas

Intune_Standard | Dynamic membership rules

Dynamic membership rules

Configure Rules Validate Rules

You can use the rule builder or rule syntax text box to create or edit a dynamic

And/Or	Property
	devicePhysicalIds

+ Add expression

Rule syntax

```
(device.devicePhysicalIds -any [_ -eq "[OrderID]Standard")
```

Get-WindowsAutopilotInfo script

- The script is recommended and recognized by Microsoft -

<https://learn.microsoft.com/en-us/autopilot/add-devices#powershell>

- You can specify the computer name, tag then pass them to script, there are many other parameters you can use, the main purpose for the script is to upload hardware hash to tenant.

Setting up for work or school

This will take a few minutes. Your device might need to restart as we complete the setup.

Known issue: Windows Autopilot device preparation with Win32 apps and managed installer policy | Microsoft Community Hub

Autopilot & Intune

Consider Autopilot and Intune are 2 different services – Autopilot is for registration (so the device knows which tenant it belongs to) and Intune is for device management.

Autopilot is for ...	Intune is for ...
Upload hardware hash to register device to the tenant	Device management
Assign device to a dynamic Entra ID group based on Tag	
Customize Out of box experience (OOBE)	
Enable Pre-provisioning	

Troubleshoot for Autopilot enrolment (ESP)

- Install-Script -Name Get-AutopilotDiagnostics –Force, you will know which app failed during autopilot
- Try install the app locally via command line
- Ensure the detection rule is valid, double check on your install command
- Use MSI default switch - msixexec.exe /i "C:\Example.msi" /L*V "C:\package.log" then check the log
- Some non-MSI installer has a log output switch too
- Output logs from scripts you deployed as Win32 apps
- You can find the log file even if the device fails during Autopilot
- Contact app vendor
- CMTrace C:\ProgramData\Microsoft\IntuneManagementExtension\Logs

Microsoft Frequent Asked Questions

Building a house...

Intune design fundamentals

- Statement of Work
- Initial discovery
- High-level
- Low-level (Architectural decisions)
- Design and Build
- Pilot
- Close
- Hypercare

Statement of Work

- Consultant may or may not be involved (Sales + Tech pre-sales/Consultant)
- Define what needs to be done, timeline, cost, etc.
- There are always minor changes in later stage and gaps , e.g. update ring is required but not mentioned in SoW, there are many granular control/build in Intune unlike other M365 project.
- How many hours are you going to spend on this project?
- Based on the size of the project – do you need a project manager to assist you?

Initial Discovery

- Have a checklist ready
- Understand customer's current process, e.g. how do they image devices, what's the pain point, how do they deploy applications, security requirements, etc.

Category	Item
Identity & User Information	Is Microsoft Entra ID already in use?
Identity & User Information	Is Hybrid Join, Entra Join, or both used?
Identity & User Information	Are users synced via Entra Connect?
Device Landscape	Types of devices used (Windows, macOS, iOS/iPadOS, Android)
Device Landscape	Ownership model: BYOD or corporate-owned?
Device Landscape	Any existing MDM/EMM solution (e.g. Workspace ONE, Jamf, MobileIron)?
Device Landscape	Device count for each OS
Device Landscape	Are devices domain-joined? Local admin access? GPO?
Apps & Software	Critical line-of-business (LOB) apps
Apps & Software	Any legacy apps requiring local domain authentication
Apps & Software	Microsoft 365 apps usage
Apps & Software	How are Apps deployed?
Apps & Software	License models for app (per-user, per-device, etc.)
Security Baseline	Is Microsoft Defender for Endpoint in use or planned?

Initial Discovery

A tenant discovery is never only about one product.

Work Packages

Work Package	Technology Area	Summary	Priority	Estimated effort
Patch Management for VMs in NextDC and Azure	Azure	Set up Patch Management for Virtual Machines across NextDC and Azure environment to ensure impact to production systems is minimized during each month's patching cycle.	Immediate	2 weeks
Azure Environment Optimization	Azure	Optimizing usage of current Azure environment in networking, monitoring, backup and Defender for Cloud enablement. Set up Azure Monitoring for all cloud resources	High	2 weeks
Azure Migration with DR enablement	Azure	Review and plan VM migration to Azure, hand over to MACG IT team to run migration and provide escalation support. Set up Disaster Recovery capabilities between the 2 Azure environments.	High	4 weeks
RDS to AVD Migration	Azure	Review existing RDS configuration and design the implementation of Azure Virtual Desktop. Run a pilot group across IT and Business units to confirm functionality before rollout in production environment.	High	6 weeks
M365 Tenant Uplift	M365	Review and uplift Microsoft 365 tenant configuration i.e. external coloration, app consent and self-service password reset, authentication methods and password protection	High	1 week
Exchange Online migration	M365	Review and uplift Exchange Hybrid configuration, work with MACG team to create a migration plan with milestones and targeted completion date.	High	2 weeks
OneDrive Enablement & User profile data migration	M365	Design and plan the migration of user profile data into OneDrive storage, create the migration process then hand over to MACG IT team to manage migration, and also develop a transition plan alongside the enablement of Autopilot and AVD services.	High	3 weeks
Autopilot Enablement	M365	Design and build Autopilot for Windows devices provisioning covering both dedicated and shared device scenarios, as well as key technologies such SCEP enrolment and VPN connectivity.	High	8 weeks
Mobile Device & Application Management	M365	Design and configure mobile device and application management for Android tablet and mobile devices.	Medium	3 weeks
File Server migration Plan	M365	Design and plan migration from onprem file server to SharePoint Online, run a pilot to confirm functionality then estimate effort for migration for rest business units in MACG	High	2 weeks
SharePoint onprem migration	M365	Design and plan migration of "The Loop" from onprem SharePoint to SharePoint Online, run a test migration to confirm functionality then set the plan for migration in PROD environment.	High	1 week
Knowledge Management	M365	MACG currently have information assets across a range of different platforms and applications, with a diverse workforce with varying needs for creating and storing assets. Sharing, collaborating and developing knowledge is an embedded practice for the whole organisation.	Medium	6 weeks
Pilot: Information Protection and DLP	M365	Design and implement Information Protection and Data Loss Prevention to a pilot group	Medium	6 weeks

High Level Design

- Ensure customer understands some fundamentals are irreversible, e.g. Hybrid join or Entra ID join
- Provides a clear understanding on what will be covered/built for this project.
- This protects us from "Why is this not included?"

11. Out of Scope

The following tasks are defined as 'Out of Scope' for this project's initial Scope of Works. These items can be included in-scope if requested, times will be updated to take additional work into consideration.

- Analysis of existing GPO's
 - We will assist with the analysis of existing GPO's to ensure they are aligned with the current environment. We will not be responsible for the implementation or removal of GPO's. Any GPO's that are identified as being obsolete or conflicting will be recommended for removal or modification.
- Setup or remediation of Always on VPN outside of Intune deployment profile
- Testing of Windows 11 Operating System feature or quality updates
- Third party software update management
 - We will assist with the planning and testing of third party application updates and deployment of updates. We will not be responsible for the implementation or removal of third party applications or updates.
- Remediation of any incompatible applications. Alternatives will be recommended where possible.
- Remediation of application settings provided
- Implementation of application whitelisting or blacklisting
 - Intune includes the ability to control applications through Intune policies, however specific deny or allow of applications are generally handled by an alternate fit for purpose utility.
- Any existing hardware modification

Architectural decisions

- Decides how configurations are configured in areas mentioned in SoW
- This protects us from "Why is it configured this way"
- This document also provides an estimate of the hours required for this project

16. OneDrive Known Folder Move (KFN)

Subject Area	OneDrive Configuration
Topic	Automatic redirection of Desktop, Pictures, and Documents folders to OneDrive. Leave this policy blank if GPO controls KFN configuration
Options	The following options will be considered: • OneDrive Known Folder Move (KFN) • None
Decision	Configure this in Intune but make it disabled for now
Comment	

17. End user Account Type

Subject Area	End user account type
Topic	Discussion on whether end user should have admin privilege or non-admin privilege
Options	The following options will be considered: • Admin privilege • Non-admin privilege
Decision	Non-admin privilege

18. Wallpaper

Subject Area	Wallpaper
Topic	Discussion on wallpaper
Options	The following options will be considered: • Wallpaper from GPO (No change required) • Wallpaper from Cloud storage (Cloud storage required) • Wallpaper from Script (Only available to new device build)
Decision	Wallpaper from GPO (No change required)

Design, Build and Troubleshoot

- Have a checklist
- There is no so called "best practices" as every environment is different. However, there are baselines you should almost always to deploy for clients.
- Reusability

<https://github.com/jseerden/IntuneBackupAndRestore>

User Acceptance Test and hand-over

Test Outcomes

Checks to ensure device provisions and is configured and working as expected:

Test Stages	Outcome
Device registered in Autopilot	
Autopilot Pre-Provisioning succeeds	
Device enrolled in Intune	
Windows Login succeeds	
Company Portal is deployed	
Microsoft Teams is deployed	
Office suite is deployed	
Wi-Fi is connected	
Network Drives are mapped	
Printers are mapped	
Certificates are deployed	
Required apps are installed	
2 nd tier app can be installed via Company Portal	

Published Applications and Scripts

Scripts for enrolment

-   Architecture Decisions V1.3-Release.pdf

-  Windows 11 build guide for Administrators.pdf
-  Windows 11 guide for end user.pdf
-  Windows 11 quick reference guide.pdf
-  Windows 11 UAT document.pdf

Pilot test

The pilot test includes whole device-built workflow, starts from "Customer requests a device".

Live Scenario

- 55 users
- Aged care company – AC aged care
- 1 IT manager and 2 IT supports. The salesperson provided you the manager's email.
- 2 aged care facilities and 1 office
- They want to upgrade Windows 10 to Windows 11 and secure their systems

As the technical person -

- What's in your mind based on the information the sale provided?
- What questions are you going to ask?

Opportunity – Business Premium

Intune

- Device enrollment + configuration policies
- EDR (Endpoint detection and response)
- ASR (Attack surface reduction) and WDAC (Windows Defender Application Control)
- LAPS (Local admin password solution)
- WHfB (Windows hello for business)
- WUfB (Windows update for business)

Universal Print

- Cloud printing solution

Commercial Licenses	Jobs Per Month
Microsoft 365 E3, E5, Business Premium	100
Microsoft 365 F3	5
Windows 10 Enterprise E3, E5,	5
Universal Print (standalone)	5

Autopilot

- Autopilot with whiteglove
- Asset tagging
- test and tag
- New starter form
- Device refurb, repair, renew
- Device disposal/erase
- Etc.

Purview

- DLP
- Labelling
- Retention Policy

Microsoft Defender suite add-on

Security (MSSP)

- MDR/SOC (with Microsoft Experts)
- Defender XDR
- SIEM (Sentinel, Splunk, etc.)
- EASM (External Attack Surface Management)
- Defender for Cloud Apps (Apps)
- Defender for Cloud and Defender for Identity (Infrastructure)

Onboarding/offboarding

- Entitlement management
- Access review
- API integration with HR system
- Power automation
- PIM & Risk-based CA

Tool	Focus	Internal or External	Key Use
Defender EASM	External visibility	External	Discover and reduce internet-facing risks
Defender for Endpoint	Endpoint protection	Internal	Detect/respond to threats on devices
Microsoft Sentinel	SIEM/SOAR	Both	Aggregate and investigate alerts
Defender for Cloud	Cloud workload security	Internal (cloud infra)	Protect Azure, AWS, GCP resources
Defender for Cloud Apps	Cloud access control	Internal (cloud apps)	CASB for SaaS apps like M365, Salesforce

Security training

- Attack Simulation and Cyber-awareness training

line-of-business (LOB) app is not generally recommended. It does not provide any command line switches and limited to MSI installer file.

① Important

When deploying Win32 apps using an installation file with the .msi extension (packaged in an .intunewin file using the Content Prep Tool), consider using [Intune Management Extension](#). If you mix the installation of Win32 apps and line-of-business apps during Windows Autopilot enrollment, the app installation may fail as they both use the Trusted Installer service at the same time.

Although Windows Autopilot doesn't support mixing of Win32 and line-of-business apps, [Windows Autopilot device preparation](#) does.

Windows app (Win32)

A **Windows app (Win32)** uses .exe or .msi installers. It also supports script packaging and pre-defined commands.

Win32 app deployment supports following -

- Custom command line switches
- Full control over install behaviour
- Scripts, MSI or EXE packaging
- Full control (requirements, detection rules, supersedence, dependencies)

Script (Win32)

Why package script in Win32 instead of using Platform script?

Script Demo – Printer mapping, Autobranding

Win32 Content Prep Tool

This tool is used to convert the file you want to deploy to .Intunewin format. .msi file is highly recommended as .msi auto-populate many command lines.

Why .msi?

- Designed for mass deployment
- Common switches supported by default including logging
- Default install and uninstall command
- Default detection rule

[Prepare a Win32 app to be uploaded to Microsoft Intune | Microsoft Learn](#)

Detection rule

There are 4 rule types -

- File-based detection
- MSI product code
- Registry Key
- Script

<https://learn.microsoft.com/en-us/intune/intune-service/apps/apps-win32-add#step-4-detection-rules>

Win32 App Deployment flow

<https://learn.microsoft.com/en-us/troubleshoot/mem/intune/app-management/develop-deliver-working-win32-app-via-intune>

Application Assignment

There are 3 assignment types for Windows device -

- Required
- Available for enrolled devices
- Uninstall

<https://learn.microsoft.com/en-us/intune/intune-service/apps/apps-deploy>

Question

You have a Win32 app in Microsoft Intune. The groups and assignments are:

- Group A contains User A and Device B.
- Group B contains Device A and User B.
- Group C contains Group A and Device A.

The app assignment is:

- Required → Group C
- Uninstall → Group A and Group B

Which users or devices will have the app installed?

- A. User A
- B. User B
- C. Device A
- D. Device B

Application update

An update is available for
the application.

App Update – Supersedence vs in-place update

Update type	Update description and details
In-place app update	• With an in-place app update, admin can only swap the app content, update the metadata, and change the detection and install commands. • Admin can't change any of the fields that aren't stored on the app with an in-place app update. For example, the admin can't modify targeting at the same time as an update. • Admin can only perform the in-place app update one app at a time.
Supersedence app update	• Admin can update an app in its entirety with a new set of configurations. • Admin can elect to send down an uninstall command to uninstall previous app versions. • Admin can update devices containing multiple app versions to the newest app version with one Supersedence configuration. The admin also maintains access to older version of the app.

<https://learn.microsoft.com/en-us/intune/intune-service/apps/apps-win32-supersedence#understand-in-place-app-update-versus-supersedence-app-update>

App Update – Winget

Winget, also known as the Windows Package Manager, is a command-line tool developed by Microsoft for discovering, installing, upgrading, and removing applications on Windows.

Winget is installed by default on Windows 11.... in user context :(

<https://github.com/Romanitho/Winget-Install>

<https://learn.microsoft.com/en-us/windows/package-manager/winget/>

Troubleshoot – app deployment

1. Install the app locally via command line
2. Ensure the detection rule is valid, double check on your install command
3. Use MSI default switch - `msiexec.exe /i "C:\Example.msi" /L*V "C:\package.log"` then check the log
4. Some non-MSI installer has a log output switch too
5. Output logs from scripts you deployed as Win32 apps
6. You can find the log file even if the device fails during Autopilot
7. Contact app vendor
8. CMTrace `C:\ProgramData\Microsoft\IntuneManagementExtension\Logs`

Group Policy Analytics

Group Policy Analytics in Microsoft Intune is a tool that helps organizations assess their existing on-premises Group Policy Objects (GPOs) and determine which settings can be migrated to Intune for cloud-based management

The screenshot displays the Microsoft Intune admin center interface. The left-hand navigation pane lists various management options, with 'Group Policy analytics' highlighted. The main content area is titled 'Windows | Group Policy analytics' and provides instructions on using the tool to analyze on-premises Group Policy Objects (GPOs). It includes a 'Group policy migration readiness' section with a progress bar and a table of migration status. The 'Import' button is prominently displayed and highlighted with a red box.

Profile
BitLocker

BitLocker

BitLocker Drive Encryption is a data protection feature that integrates with the operating system and addresses the threats of data theft or exposure from lost, stolen, or decommissioned computers. Did you know? You can view the encryption status of devices in the Encryption report (Devices - Monitor - Encryption Report). This report shows the encryption status on the device, encryption readiness and any prerequisites missing or not met for encryption on devices.

This policy applies to: Windows 10 and later

The settings in this policy can be targeted to: MDM supported devices

All Windows device should have BitLocker enabled silently without user interaction.

<https://learn.microsoft.com/en-us/intune/intune-service/protect/encrypt-devices>

Local Admin Password Solution

The screenshot shows the Microsoft Intune console interface. On the left, the 'Account protection' option in the navigation pane is highlighted with a red box. The main area displays a table of policies, including 'LAPS 2.0' and 'Local admin account'. On the right, the 'Create a profile' pane is open, showing the 'Platform' as 'Windows' and the 'Profile' as 'Local admin password solution (Windows LAPS)'. This pane is also highlighted with a red box. Below the profile name, it states: 'Local admin password solution (Windows LAPS)', 'Windows Local Administrator Password Solution(Windows LAPS) automatically manages and backs up the password of a local administrator account on Windows 10 and later. It can also be used to manage the password of a local administrator account on Windows Server Active Directory - joined or Windows Server Active Directory - standalone.', 'This policy applies to: Windows 10 and later', and 'The settings in this policy can be targeted to: MDM supported devices'.

Policy name	Policy type	Assigned
LAPS 2.0	Local admin password solution	Yes
Local admin account	Local user group membership	Yes

Note that LAPS does not create a local account and LAPS can only manage one admin account per device.

<https://learn.microsoft.com/en-us/intune/intune-service/protect/windows-laps-overview>

Attack Surface Reduction

The screenshot displays the Microsoft Endpoint Security console interface. The left-hand navigation pane is expanded to show 'Attack surface reduction' under the 'Manage' section. The main content area is titled 'Endpoint security | Attack surface reduction' and includes a search bar and tabs for 'Policies' and 'Reusable settings'. A descriptive paragraph explains that ASR policies help reduce attack surfaces by minimizing vulnerability points. Below this, there are buttons for '+ Create Policy', 'Refresh', and 'Export'. A table titled 'Attack surface reduction policies' lists several policies, including WDAC, ASR - Block USB, ASR - Controlled Folder Access, and ASR - ML2-OM-01. The table columns are Policy name, Policy type, Assigned, and Platform. A search bar above the table allows filtering by profile name.

Microsoft Defender for Endpoint

Microsoft Defender for Endpoint is a cloud platform integrated with Microsoft eco-system that manages endpoint security.

<https://learn.microsoft.com/en-us/defender-business/mdb-overview>

Onboarding

- Sign in to Intune portal
- Go to Endpoint security -> Microsoft Defender for Endpoint -> Open Microsoft Defender for endpoint admin console.
- Navigate to Settings -> Endpoints -> Microsoft Intune connection
- Go back to Intune portal and create a configuration profile -> Microsoft Defender for Endpoint -> assign to all devices

Microsoft Intune connection

Connects to [Microsoft Intune](#) to enable sharing of device information and enhanced policy enforcement.

Intune provides additional information about managed devices for secure score. It can use risk information to enforce [conditional access](#) and other security policies.

Vulnerability Management and Device Inventory

View in map Device value ...

- Set criticality
- Manage tags
- Report device inaccuracy
- Run Antivirus Scan
- Collect Investigation Package
- Restrict App Execution
- Initiate Automated Investigation
- Initiate Live Response Session
- Isolate Device
- Action center
- Download force release from isolation script
- Exclude
- Go hunt
- Turn on troubleshooting mode
- Policy sync

Controlled Folder Access

Controlled folder access (CFA) demonstrations (block ransomware)

09/30/2025 • Applies to: Microsoft Defender for Endpoint Plan 1, Microsoft Defender for Endpoint Plan 2

Controlled folder access helps you protect valuable data from malicious apps and threats, such as ransomware. Microsoft Defender Antivirus assesses all apps (any executable file, including .exe, .scr, .dll files and others) and then determines if the app is malicious or safe. If the app is determined to be malicious or suspicious, then the app can't make changes to any files in any protected folder.

Scenario requirements and setup

- Windows 10 1709 build 16273
- Microsoft Defender Antivirus (active mode)

PowerShell commands

PowerShell  Copy

```
Set-MpPreference -EnableControlledFolderAccess (State)
```

PowerShell  Copy

```
Set-MpPreference -ControlledFolderAccessProtectedFolders C:\demo\
```

<https://learn.microsoft.com/en-us/defender-endpoint/defender-endpoint-demonstration-controlled-folder-access>

Default policies

When you're setting up (or maintaining) Defender for Business, an important part of the process includes reviewing your default policies, such as:

- [Next-generation protection](#)
- [Firewall protection](#)

Additional policies

In addition to your default security policies, you can add other policies, such as:

- [Web content filtering](#)
- [Controlled folder access](#) (*requires Microsoft Intune*)
- [Attack surface reduction rules](#) (*ASR rules are configured in Intune*)

Advanced features and settings

You can view and edit settings for advanced features, such as:

- [Turning on \(or off\) advanced features](#);
- [Specifying which time zone to use in the Microsoft Defender portal](#); and
- [Whether to receive preview features as they become available](#).

<https://learn.microsoft.com/en-us/defender-business/mdb-configure-security-settings#review-settings-for-advanced-features>

Compliance Manager

Microsoft Purview Compliance Manager is a solution that helps you automatically assess and manage compliance across your environment. Compliance Manager can help you staying current with regulations and reporting to auditors.

Assessments

Assessments help you implement data protection controls specified by compliance, security, privacy, and data protection standards, regulations, and laws. Assessments include actions that have been taken by Microsoft to protect your data, and they're completed when you take action to implement the controls included in the assessment. [Learn how to manage assessments](#)

Sensitivity Label

When you assign a sensitivity label to content, it's like a stamp that's applied. It is customizable and persistent.

When viewed by users in your organization, an applied sensitivity label appears like a tag on apps and can be easily integrated into their existing workflows.

Sensitivity labels

 You can now create sensitivity labels with privacy and access control settings for Teams, SharePoint sites, and Microsoft 365 Groups. To do this, you must first [complete these steps](#). Sensitivity labels are used to classify email messages, documents, sites, and more. When a label is applied (automatically or by the user), the content or site is encrypted files, add content marking, and control user access to specific sites. [Learn more about sensitivity labels](#)

 Create a label  Publish labels  Export  Refresh

☐	Name		Priority	Scope	Created by
☐	General - Non sensitive information		0	Files & other data assets, Email, Mee...	Ted Zhang
☐	Confidential		1	Files & other data assets, Email, Mee...	Ted Zhang
☐	Highly Confidential		2	Files & other data assets, Email, Mee...	Ted Zhang

Protect sensitive data referenced in Copilot and agent responses

Sensitivity labels help protect files by controlling user access to data. Microsoft 365 Copilot and agents honor sensitivity labels on files and only show users files they already have access to in prompts and responses. Use data risk assessments to identify potential oversharing risks, including unlabeled files.

Unlabeled files in Copilot and agent interactions

Top 2 SharePoint sites with unlabeled files in Copilot and agent interactions

[View top 2 sites](#)

Data Loss Prevention (DLP)

Microsoft Purview Data Loss Prevention (DLP) helps you detect and prevent the unintentional sharing, transfer, or use of sensitive information across your Microsoft 365 environment.

Policies

Use data loss prevention (DLP) policies to help identify and protect your organization's sensitive info. For example you can set up policies to help make sure information in email and docs isn't shared with the wrong people. [Learn more about DLP](#)

 Some of your devices are in not updated state. [Go to onboarding devices to see more details](#)

 **Set up billing to continue protecting activity in Fabric.** Support for Fabric in DLP is now a pay-as-you-go capability. Existing policies scoped to Fabric will work for a short time, but you can't edit them or create new ones for Fabric until you link an Azure subscription for billing. Policies scoped to other sources aren't linked to the pay-as-you-go billing model. [Learn more about pay-as-you-go billing](#) Get started
